

Depth noses are essential in ensuring perfect and constant engraving depth.

**Steel noses** - the most commonly used noses (resistant and highly polished for minimum plate scratching)

**Teflon noses** - for engraving on easily scratched material such as metal

**Swivel noses** - for engraving on curved surfaces (steel or teflon)

**Prismatic noses** - for engraving on jewellery items such as ID bracelets or bangles

**Vacuum noses** - same as steel nose + can be linked to swarf extractor

**Diamond noses** - provides better rigidity and accuracy than a non rotative diamond cutter - mainly used for photo engraving (Photostyle) and jewellery
